Eng: S3 Replication automatically copies objects from one bucket to another.

11.What are S3 Event Notifications?
S3 Event Notifications send notifications when specific events happen in a bucket, such as object creation or deletion. These events can trigger services like Lambda, SNS, or SQS.
Simple ga gurthupettuko:
S3 Event Notifications ante bucket lo event jariginappudu other service ki notification pampinchadam.
Eng: S3 Event Notifications send notifications when specific S3 events occur.

12.What are S3 Access Points?
S3 Access Points provide dedicated access points for accessing data in an S3 bucket. They help manage access for different applications or users with different permissions.
Simple ga gurthupettuko:
Access Point ante S3 bucket ki different applications or users kosam separate access point create cheyyadam.
Eng: S3 Access Points provide dedicated access to data in an S3 bucket.

13.What is S3 Object Lock?
S3 Object Lock prevents objects from being deleted or overwritten for a defined retention period. It is mainly used for data protection and compliance requirements.
Simple ga gurthupettuko:
Object Lock ante fixed time varaku objects ni delete or overwrite cheyyakunda protect cheyyadam.
Eng: S3 Object Lock prevents objects from being deleted or overwritten during a retention period.

14.What is CORS in S3?
CORS allows web applications running on one domain to request resources from an S3 bucket on another domain. It is useful when a website needs to access S3 objects from a browser.
Simple ga gurthupettuko:
CORS ante different domain website S3 resources ni browser nundi access cheyyadaniki allow cheyyadam.
Eng: CORS allows web applications from another domain to access S3 resources.

15.What is S3 Inventory?
S3 Inventory provides a scheduled report of objects and their metadata stored in an S3 bucket. It is useful for auditing, compliance, and managing large numbers of objects.
Simple ga gurthupettuko:
S3 Inventory ante bucket lo unna objects details ni report laga provide cheyyadam.
Eng: S3 Inventory provides reports about objects stored in an S3 bucket.

16.What is S3 Storage Lens?
