Eng: AWS Billing & Cost Management helps monitor, analyze, and control AWS costs.

2.What is Cost Explorer?
Cost Explorer is a tool used to view and analyze AWS costs and usage over time.
It helps identify which AWS services, accounts, or resources are contributing to the cost.
Simple ga gurthupettuko:
Cost Explorer ante AWS costs ekkada entha spend avthunnayo analyze cheyyadaniki use chestham.
Eng: Cost Explorer is used to analyze AWS costs and usage.

3.Why do we use Cost Explorer?
We use Cost Explorer to understand AWS spending and identify areas where costs are increasing.
We can filter costs by service, account, Region, and other available dimensions.
Simple ga gurthupettuko:
AWS lo ekkuva cost ekkada avthundo identify cheyyadaniki Cost Explorer use chestham.
Eng: Cost Explorer helps identify where AWS costs are increasing.

4.What are AWS Budgets?
AWS Budgets allows us to set custom cost or usage limits for our AWS account.
It can send alerts when actual or forecasted spending reaches the configured threshold.
Simple ga gurthupettuko:
AWS Budgets ante cost limit set chesi limit reach ayite alert pondadaniki use chestham.
Eng: AWS Budgets allows us to set cost limits and receive alerts.

5.Why do we use AWS Budgets?
We use AWS Budgets to control AWS spending and avoid unexpected costs.
For example, we can set a monthly budget and receive an alert when spending reaches a specific amount.
Simple ga gurthupettuko:
Monthly AWS cost limit cross avvakunda monitor cheyyadaniki Budgets use chestham.
Eng: AWS Budgets helps control spending by monitoring predefined cost limits.

6.What is Cost Anomaly Detection?
Cost Anomaly Detection identifies unusual AWS spending patterns and helps alert us about unexpected cost increases.
It uses machine learning to detect spending that is different from normal usage patterns.
Simple ga gurthupettuko:
Normal kanna unusual ga cost increase ayite identify chesi alert cheyyadaniki Cost Anomaly Detection use chestham.
Eng: Cost Anomaly Detection identifies unusual AWS spending patterns.

7.What is a Cost Allocation Tag?
Cost Allocation Tags are tags used to organize and track AWS costs based on resources, teams, or projects.
They help identify how much different applications or teams are spending.
Simple ga gurthupettuko:
Team or project wise AWS costs track cheyyadaniki Cost Allocation Tags use chestham.
Eng: Cost Allocation Tags help track AWS costs by teams or projects.

8.What is the difference between Cost Explorer and AWS Budgets?
Cost Explorer is mainly used to analyze existing AWS costs and usage.
AWS Budgets is used to set spending limits and receive alerts when costs reach those limits.
Simple ga gurthupettuko:
Cost Explorer cost analysis kosam, AWS Budgets cost limit and alerts kosam.
Eng: Cost Explorer analyzes costs, while AWS Budgets monitors spending limits.

9.What is the difference between AWS Budgets and Cost Anomaly Detection?
AWS Budgets monitors spending against a predefined budget or threshold.
Cost Anomaly Detection identifies unusual spending patterns that may indicate unexpected costs.
Simple ga gurthupettuko:
Budgets fixed cost limit ni monitor chestundi, Anomaly Detection unusual spending ni identify chestundi.
Eng: Budgets monitors predefined limits, while Cost Anomaly Detection identifies unusual spending.

10.How would you find why AWS costs suddenly increased?
I would use Cost Explorer to compare the current and previous costs.
Then I would check the service, Region, account, and usage details to identify which resource caused the increase.
Simple ga gurthupettuko:
Cost sudden ga increase ayite Cost Explorer lo service and usage wise check chestham.
Eng: I would use Cost Explorer to identify the service or usage causing the cost increase.

11.How would you prevent unexpected AWS costs?
I would configure AWS Budgets with appropriate cost thresholds and alerts.
I would also enable Cost Anomaly Detection to identify unusual spending patterns.
Simple ga gurthupettuko:
Unexpected cost avoid cheyyadaniki Budgets + Cost Anomaly Detection use chestham.
Eng: I would use AWS Budgets and Cost Anomaly Detection to prevent unexpected costs.

12.How would you track AWS costs for different projects?
I would use Cost Allocation Tags on resources belonging to different projects or teams.
Then I would use AWS cost management tools to analyze spending based on those tags.
Simple ga gurthupettuko:
Different projects costs separate ga track cheyyadaniki Cost Allocation Tags use chestham.
Eng: I would use Cost Allocation Tags to track costs by projects or teams.
